1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5, drawn to a guide, stop means and sheet-position detection means subcombination, classified in class 271, subclass 225.
  - II. Claims 6-18, drawn to a sheet mounting unit, image forming means, a reversal guiding channel, skew correction means, sheet position detections means & image formation control means subcombination, classified in class 399, subclass 130+.Note that claims 6-13 have been grouped herewith as forming an indivisible invention.

2. The inventions are distinct, each from the other because:

3. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I (at least base claim 1) has separate utility such as being utilized without imaging forming means, a sheet mounting unit, etc. and at least base claims 6, 10 and 14 can be utilized without a guide. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the
